CE

As an ISO 9001 certified company we can ensure that every one our customers receives a generator of superior quality that has been tested rigorously prior to shipment. The certification is a result of our commitment to continuous improvement and guarantees quality in the processes of design, manufacture and marketing of all AGG Power units. This standard entails the inspection of each component and meticulous control over every phase from the start of the production line. Each department, from sales to the assembly line, complies with the specifications and has the full participation and involvement on behalf of the AGG Power personnel, whose main focus is always customer satisfaction.

AGG Power entire diesel generator sets complies with the CE marking, which includes the following directives:

- 2006/42/EC Machinery safety.
- 2006/95/EC Low voltage
- EN 60204-1: 2006+A1:2009, EN ISO 12100:2010, EN ISO 13849-1: 2008, EN 12601: 2010

The rating is according to ISO 8528-1: + 25°C mASL; 30% relative humidity. The power losses please consult AGG Power Technical Apartment.

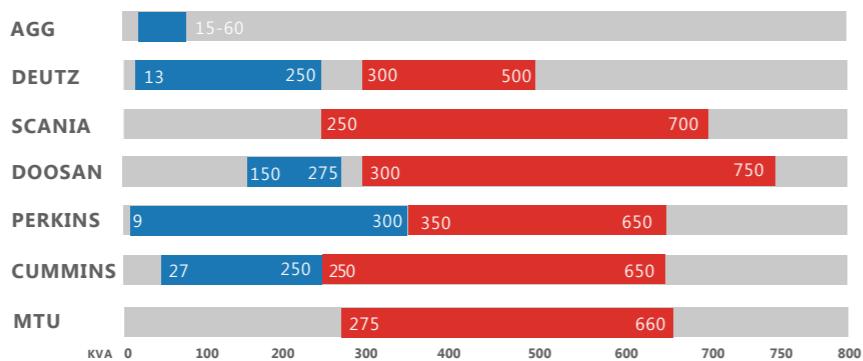

PRP-ISO8528: prime power is the maximum power available during a variable power sequence, which may be run for an unlimited number of hours per year, between stated maintenance intervals. The permissible average power output during at 24 hours period shall not exceed 80% of the prime power. 10% overload available for governing purposes only.

ESP-ISO8528: It is defined as the maximum power available, under the agreed operating conditions, for which the generating set is capable of delivering for up to 500 h of operation per year (of which no more than 300 for continuative use) with the maintenance intervals and procedures being carried out as prescribed by the manufacturers. No overload capability is available.

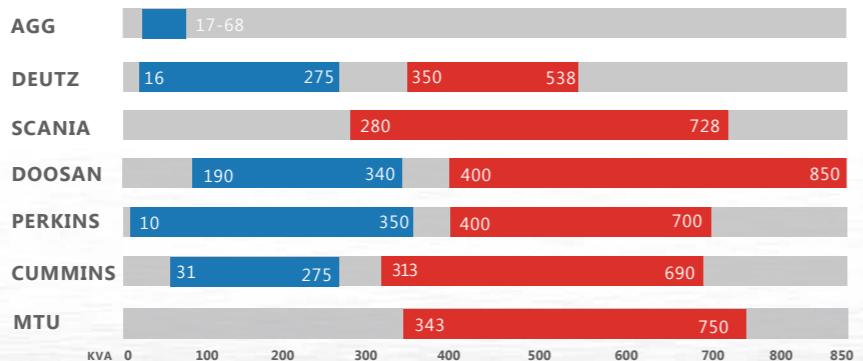

AGG Power reserves the right to modify any characteristic prior notice.

AGG Power generator sets for E series combine the robustness and versatility. The equipment is designed for use in all kinds of applications. Such as events, oil & gas, construction , mining, office, bank , hotels etc. The generator sets can withstand extreme working conditions, minimizing running and maintenance cost, easy to manage that are simple to operate. In short, compact and durable gensets which will guarantee you a profitable investment.

AGG Power
Solutions

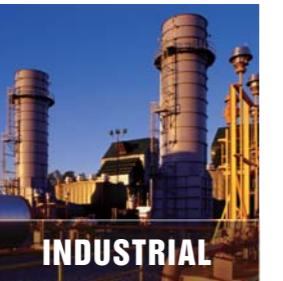

WHATEVER YOU NEED

Whatever your industry

AGG Power generator sets are applicable to many different industries below:

CONSTRUCTION

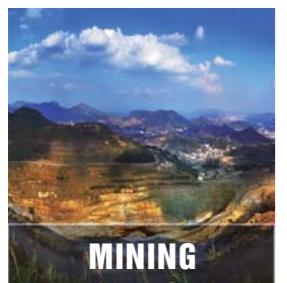

INDUSTRIAL

HOSPITAL

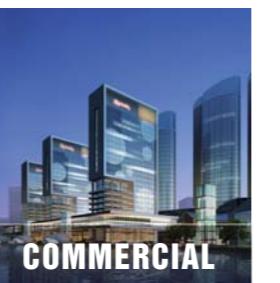

AIRPORT

MINING

OIL & GAS

COMMERCIAL

BANK

10-935kVA

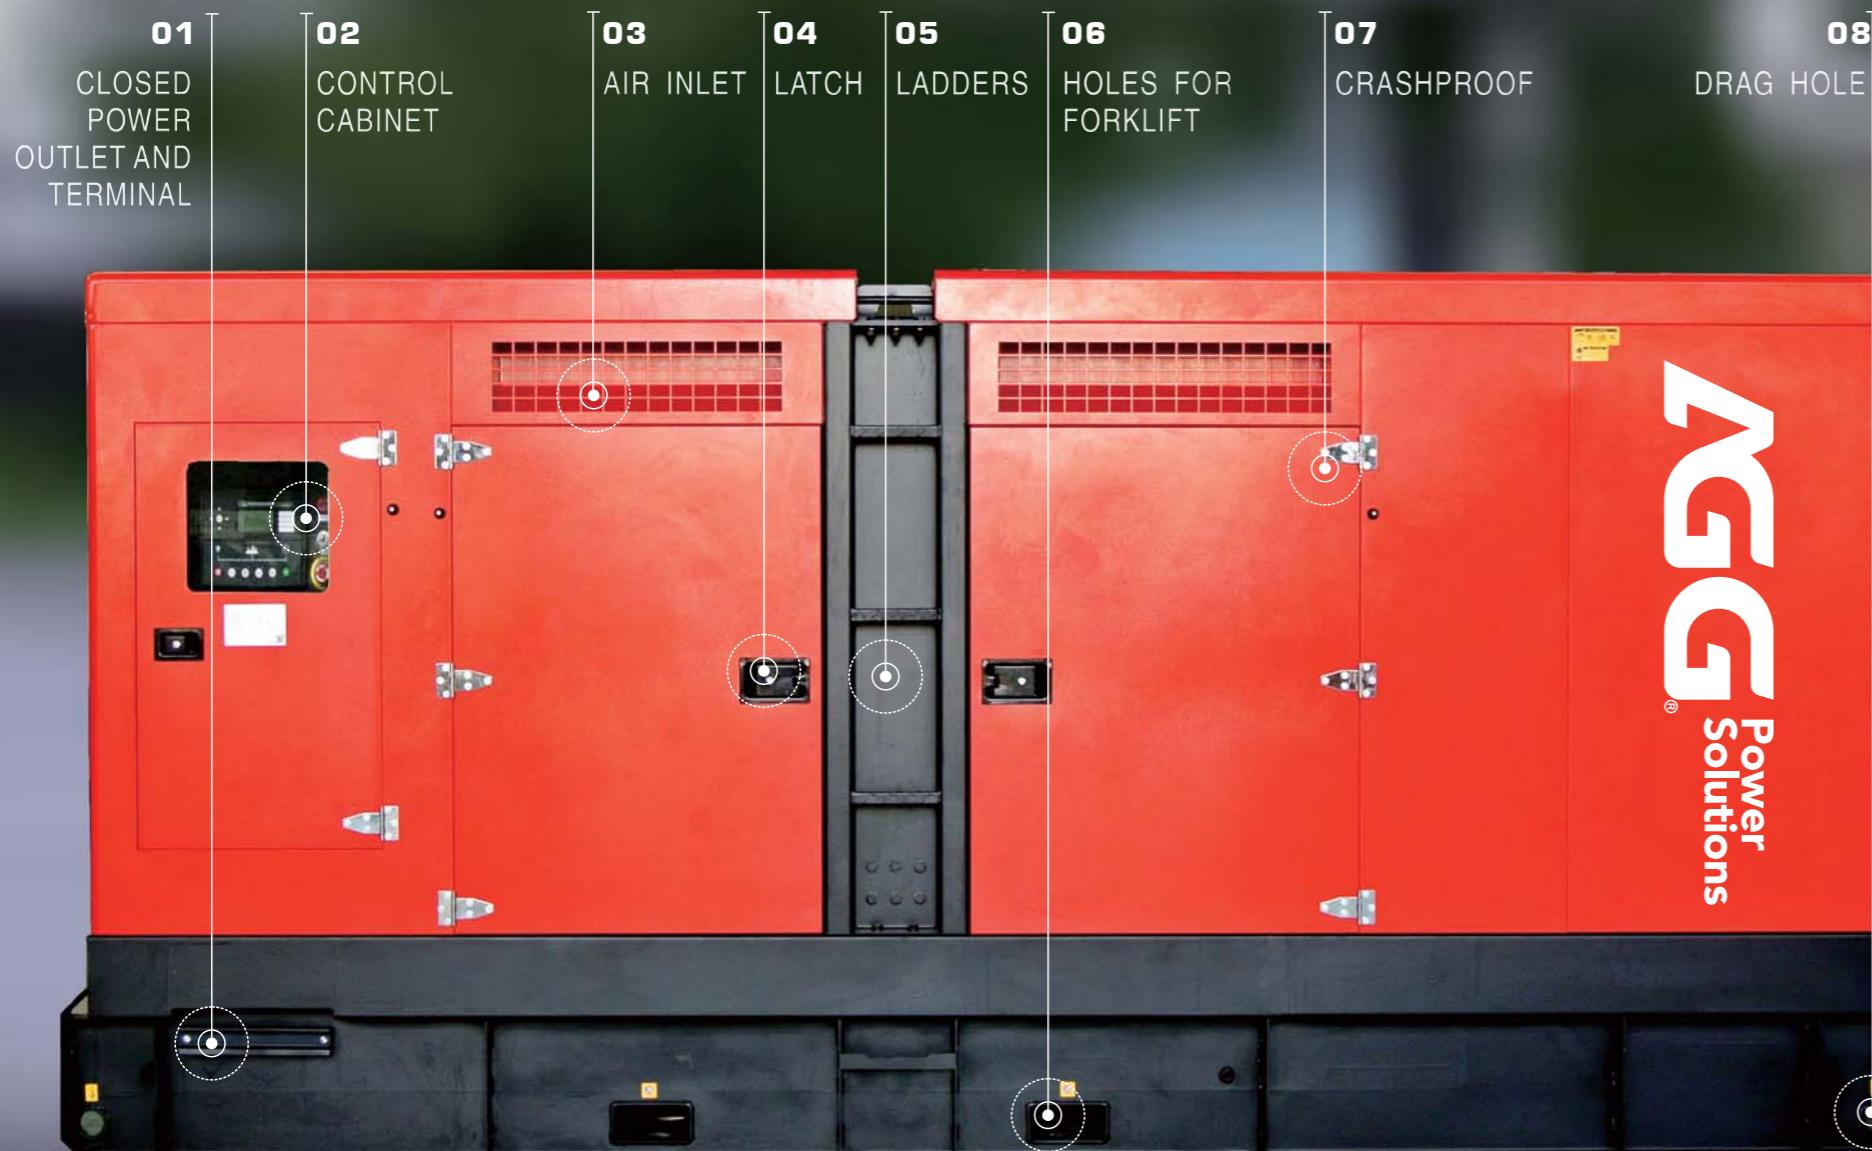

A wide range of pre-integrated power systems are available from 10 kVA to 935 kVA.

Benefits

- Power range of genset:10-935kVA.
 - Built-in quality sound-proof standard container.
 - Stable performance, reliable-performance, economical efficiency,easy to maintain.
 - 24 hours continued running.
 - Low fuel consumption.
 - Easy and safe power output.
-
- Outstanding noise reduction performance with low noise level.
 - Easy to move,able to meet requirements of different environments and occasions.
 - Rainproof and dustproof canopy.
 - Easy to install and test.
 - Multiple large gensets can be used in parallel.
 - Remote control.

GENERATOR SETS E SERIES

AGG Power Solutions

HIGH RELIABILITY

Using Cummins, Perkins and other international brand engines, the generators with superior performance and best cost performance, compact structure, strong power, reliable performance and long service life; The alternator can be installed with PMG and anti-condensation heater, which have gone through dipping process of more than three times and have strong corrosion resistance.

SAFETY

Design, production and testing of the generator sets comply with EU CE safety standard; Equipped with circuit breaker when engine stops in emergency for avoiding possible electric shock risk when re-start; The controller has historical operation recording function for troubleshooting and inspection. The integrated circuit adopts wiring harness assembly, many places have used bellows with good high-temperature resistance performance; the control cable is heat resisting with two protection insulation layers.

09
BATTERY ISOLATOR

10
DOUBLE EMERGENCY PUSH BUTTON.

Sound-proof & Water-proof

Durability

- Durable, weather-proof and crashproof thick base ensures safe transportation for long time.
- Canopy is made of electrolytic sheet material featured with high hardness and strong corrosion resistance, which is durable.
- The generator set is painted with high quality paint in accordance with ocean shipping requirement and UV protection requirement under bright lights.

User-friendly Design

- Maintenance works of the genset can be performed from the same side of control cabinet;
- Electrical circuit diagram and notes on operation and maintenance are sticked on the access door;
- Part name, part number and other information are displayed on all wearing parts and electrical components;
- All genset are equipped with folders for data files;
- High-temperature parts, high-voltage parts, rotating components and components which would jeopardize Personnel and property safety are clearly marked with warnings and safety labels and installed in the genset as spare parts for users;

Environmental Protection

- Residential-type mufflers are available. Standard mufflers can reduce genset noise, which would not affect daily life.
- The interior is lined with mineral wool, which helps absorbing massive noise and heat during the operation of genset. This type of sound absorbing material does not produce carcinogens.

Easy to Maintain

- The daily maintenance work can be performed on both sides of the machine, and wide doors allow you to easily conduct inspection work, such as engine oil check, coolant examination.
- Fuel filters and air filters are installed at the same side of the machine for convenient maintenance.
- Removable panels ensure very convenient repairing and cleaning. Air filter element can be removed easily.
- The operator can perform maintenance of air filter from access door.

 Water-cooling

 Open-side type

 Sound-proof type

 The engine is Germany original

The rating is according to ISO 8528-1: + 25°C mASL; 30% relative humidity. The power losses please consult AGG Power Technical Apartment.

Further voltage rating are available under request: 50HZ_380V/415V/440V, 60HZ_208V/240V/380V/440V/480V

PRP-ISO8528: prime power is the maximum power available during a variable power sequence, which may be run for an unlimited number of hours per year, between stated maintenance intervals. The permissible average power output during a 24 hours period shall not exceed 80% of the prime power. 10% overload available for governing purposes only.

ESP-ISO8528: It is defined as the maximum power available, under the agreed operating conditions, for which the generating set is capable of delivering for up to 500 h of operation per year (of which no more than 300 h for continuative use) with the maintenance intervals and procedures being carried out as prescribed by the manufacturers. No overload capability is available.
